

Today's platform; tomorrow's prospects

hr | QUIRC

Our technology offers end-to-end capability enabling you to run a next-generation digital life insurance business. The customer journey is central to our processes and we offer digital self-service for both sales and servicing as a core design philosophy. Tested and refined over years in a real-world environment, our system intelligently handles a comprehensive suite of fully underwritten life insurance products. We offer hr | QUIRC as a one-stop-shop or as a modular system.

Digital First (with self-service in mind): This maximises automation for both sales and servicing. It also means that products and processes, while comprehensive, are streamlined accordingly.

Ready-to-use underwriting rule: Our reimaged automated underwriting process provides a user-friendly experience based on our underwriting philosophy. We can offer cover in real-time for up to 75% of applications through our dynamic rule-set, which may be tailored to your requirements.

Multi-year strategic development partnership: Our primary goal is long-term reinsurance relationships and accordingly we offer significant licensing discounts. Our system is extensively customisable but configurable functionality is limited. This allows significant flexibility and necessitates the partnership.

SaaS running on cloud: We offer the best-of-breed in hosting capabilities, data security protocols and the ability to scale the use of the system easily and cost-effectively. We maintain the system and charge a monthly fee for software, hardware and support, only payable from go live.

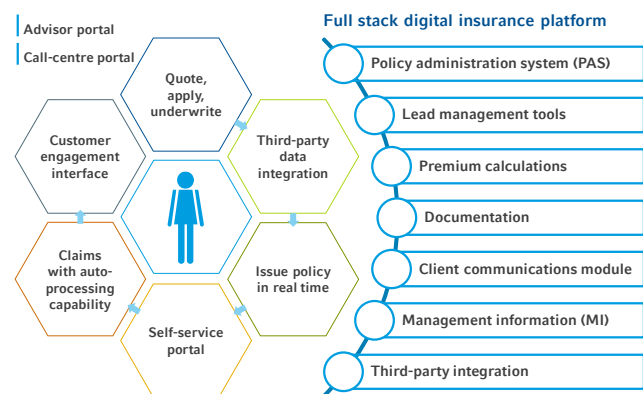

Seamless integration: Securely connect your data and back-end systems to our platform through customisable APIs and views.

Ongoing support: Our service includes regular content updates, which ensure that your rules are kept up to date with underwriting advancements and regulatory requirements. At no additional cost, we also offer an enhanced support service in the first year of implementation to ensure a smooth transformation process.

BI and dashboards: We provide access to real-time dashboards with the level of detail that you require for your operative and strategic decisions and analysis tools for business insights into your underwriting and sales experience.

Future proofing: Our clients can take advantage of all future enhancements in hr | QUIRC. This includes our ongoing innovation in automated underwriting using third-party data and employing machine learning and AI to enter the world of predictive underwriting.

Customer-centric approach
